

**Title:** Migration Impact On health

**Acronym:** M I O

**Project leader:** Josep Maria Haro

**Host organisation:** Fundació Sant Joan de Déu

**Main purpose of the project:**

The present study aims: (1) To provide robust scientific evidence in order to understand the complex process of migration and its impact on mental health; (2) To design and develop a novel multi-modal app with unaccompanied minor migrants (3); to co-create an e-health platform multi-stakeholder in Spain.

**Design/methodology/approach:**

MIO will include results from extended interviews, questionnaires and co-creation activities with an in-depth analysis of current local and national policies and strategies on social inclusion in unaccompanied migrant minors. It will also analyse and generate key evidences and scientific data in order to translate research findings into action recommendations.

**Potential results:**

The present study will identify risk and protective factors and examine unique patterns of change in psychical and mental health trajectories over time, by using also a novel multi-modal app. Besides the scientific outputs, results will be used to develop an e-health platform to facilitate new cooperative actions in Spain.

**Social relevance of the research:**

Robust and data-based evidence is crucial to understand psychosocial needs and barriers of UMM population and fully participating in host societies. MIO will analyse and produce key data in order to translate research findings into action recommendations and lessons learned for guidance futures public health and social interventions fields.

**Originality/value of the project:**

Quantitative and qualitative research of MIO project will be provide valuable insights at both health and social care intervention fields. In addition, this evidence will be used to co-create digital tools focusing on person-centred model and promoting a participative multi-stakeholder approach.
